We put a high degree of strain on our feet. They have to adapt to the required movements and absorb the forces placed on the hips, knees and ankle joints. Add to this the constant shifting of the centre of gravity. This load pattern shows how forces affect the feet and which areas are affected in particular.

Handmade in Germany

- Padding under the centre of the heel - relieves the foot
- Padding under the forefoot - absorbs when walking
- Medial and metatarsal arch supports - provide optimal support
- Forefoot perforations - ensure good ventilation

The inserts manufactured using proven film technology are adapted in their shape and structure to today's business shoes. Due to their low height, they are easy to insert in the shoe and offer optimal wearing comfort.
